

## SMART DRY ERASE WALLCOVERING

Please ensure you read the instructions carefully before you apply Smart Dry Erase Wallcovering.

1

### PREPARE THE SURFACE

Ensure the wall is clean and dry and remove all previous wallcoverings. Smooth out any rough or uneven surfaces and fill cracks and holes with filler. Absorbent bases should be treated with a primer, such as Smart White Primer, before the application of Smart Dry Erase Wallcovering.

2

### APPLY ADHESIVE

Apply a ready mixed wallcovering adhesive to the wall with a roller, as per the manufacturer's instructions.

3

### WALLCOVERING INSTALLATION

Smart Dry Erase Wallcovering can be installed either vertically or horizontally, although horizontally is recommended to minimise impact of joints/seams on writing areas.

- Hang the first length of your wallcovering roughly 0.5m from the floor, so that the seam is not in the centre of the wall (this is where most writing will occur).
- Affix the wallcovering to the adhesive you have applied to your surface.
- Reverse every other length, regardless of vertical or horizontal installation method.
- Smooth from the middle towards outer edges, using a wallcovering brush, making sure there are no bubbles.
- Be sure to remove any excess adhesive.
- At the joints/seams, overlap wallcovering and double cut right through with a sharp blade.
- Change this blade for each length to ensure a good joint.
- Do not stretch material to butt at joints/seams.
- Once wallcovering installation is complete, wipe the entire surface clean with a damp cloth to remove any excess adhesive residue.

4

### ALLOW TO DRY

Smart Dry Erase Wallcovering should be left to dry for 24 hours before use.

### Using your Smart Dry-Erase Surface

For best results, we recommend using high quality whiteboard accessories, such as those available on our website. We also recommend cleaning on a regular basis with a microfibre cloth and our cleaning fluids.
